

# Search Visualization

*A Bird's-Eye View of Your Data, Anytime*

*It's day one. Your ediscovery data has been collected and loaded into DISCO. Now what? What does your collection of documents look like from a high level? How should you organize your review workflow?*

*DISCO Search Visualization to the rescue, enabling you to interactively visualize your entire document set, no matter how large, with zero setup. From email timelines to breakdowns of custodians and document types, you can point-and-click to explore and understand your data, instantly and intuitively.*

## Early (and Middle and End) Case Assessment

DISCO Search Visualization empowers lawyers and legal professionals to graphically explore and understand their data set from a high level, throughout the life of a case. Trends and hotspots, like increased email activity over a certain time period or an unexpected lack of documents from a particular custodian, can be identified almost instantly with a few clicks.

Search Visualization replaces cumbersome early case assessment (ECA) tools that usually require a separate setup process (or even a separate piece of software). DISCO's Search Visualization is an integral part of DISCO's document review platform, making transitioning from a high-level overview to searching for and viewing the actual documents a snap.

# DISCO combines world-class engineering with a deep love and respect for the law to deliver the best legal technology.

## Explore Immediately, with Zero Setup

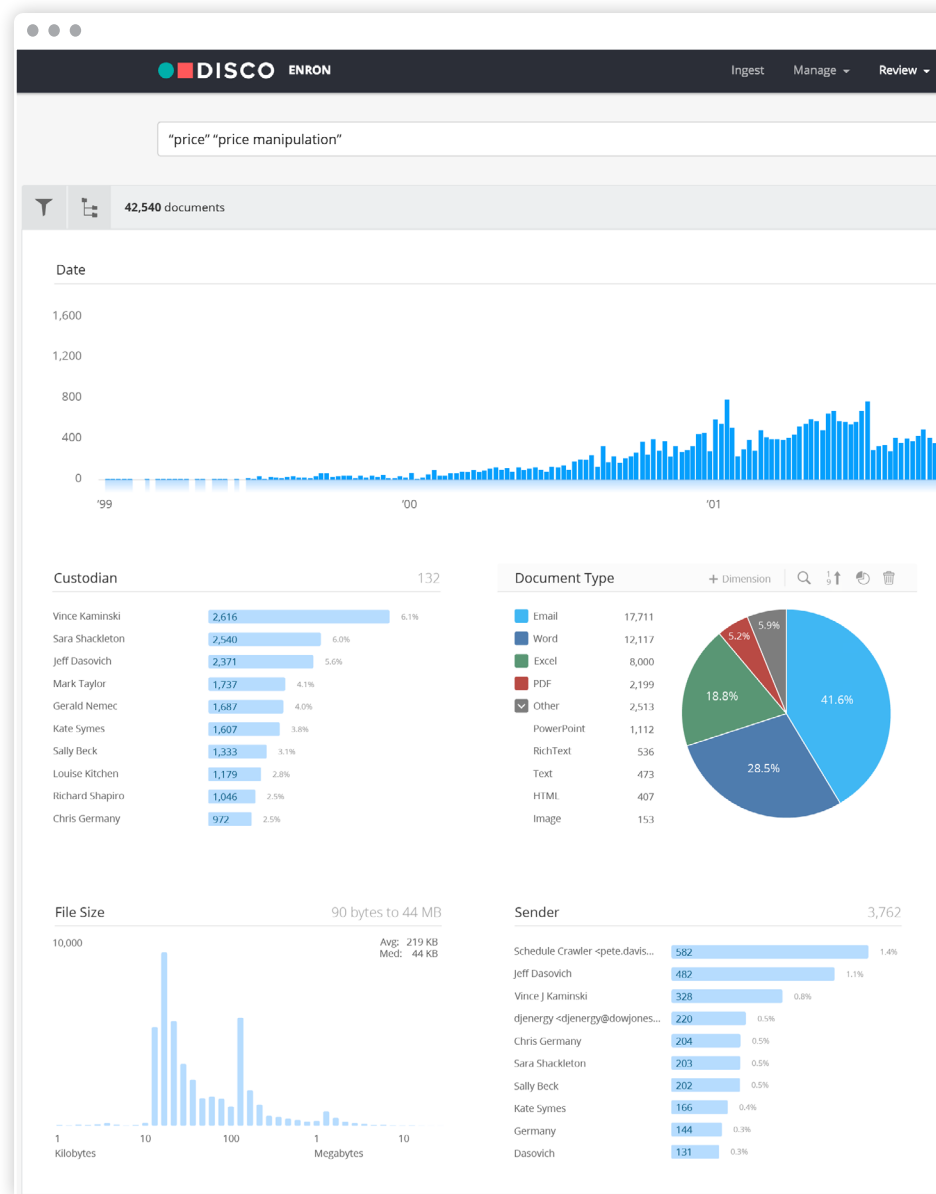

DISCO Search Visualization is ready out-of-the-box, as soon as documents are loaded. No need to waste time configuring settings, choosing search engines, or waiting for analytics to be processed. Critical data analysis first-steps, like confirming proper document collection and organizing the review workflow, can begin immediately.

## Drill Down in Real Time

As data values are selected or time ranges are adjusted, the Search Visualization charts update instantly to reflect the narrowed document universe, helping to discover trends and validate hypotheses about the data. If your investigation leads to a dead end, easily back out of a selection, or reset the search entirely, with a single click.

## Investigate, Share, Repeat

As exploration continues and valuable insights are found, you can promote your current selections to the search bar, where they become part of your search, and search history. From this point forward the results of your investigation can be saved and shared with others, used to feed review stages in workflow or power QC, instantly.

As the leading provider of software as a service solutions developed by lawyers for lawyers, DISCO is reinventing legal technology to automate and simplify complex and error-prone tasks that distract from practicing law. DISCO has been embraced by more than 400 law firms, including 50 of the AmLaw 200, as their first choice for innovative technologies that help great lawyers and their teams secure justice and win cases.
